

Octo

Anti-Dandruff Shampoo

أوكتو شامبو ضد القشرة

شامبو ضد القشرة بتركيبة رباعية: بيروكتون أولامين، زنك بيريثيون، سيلينيوم سلفايد، وحمض الساليسيليك، مع زيوت طبيعية.

العلامة التجارية	الشكل	درجة الحموضة	الاستخدام

01 بطاقة المنتج

اسم المنتج (كما هو مدرج)	Octo anti dandruff shampoo
على العبوة	AVIANCE — Octo — Anti-Dandruff Shampoo — Piroctone olamine, Selenium sulfide, Zinc pyrithione, Salicylic acid, Neem oil — pH 5.5 — 200 ML
الحجم	200 ml
الاستخدام	2-3 times / week
السعر	55 55 — SR ريال سعودي
المصنّع (التركيبة)	Brand International for food supplements and cosmetics — مصنع براند انترناشيونال (رئيس مجلس الإدارة: حاتم محمد السيد)

02 شهادة إخطار تسويق منتج تجميلي — SFDA

رقم الإدراج — Notification Number	CN-2023-84129
الحالة	Active
الاسم في سجل الإخطار	أوكتو شامبو للقشرة
العلامة التجارية	AVIANCE
الباركود	6772505023108
حجم العبوة	200 ملي لتر
نوع المنتج — Product Category	Hair and scalp products
تاريخ الإصدار — Issue Date	23/5/2023
تاريخ الانتهاء — Expiry Date	23/11/2027
المدرج — The Notifier	Areej Najd for cosmetics — مؤسسة أريج نجد لمستحضرات التجميل
التوقيع	Maha Mosbeh Alghamdi — رئيس قسم تسجيل الأدوية ومنتجات التجميل

03 التركيبة الكمية — Composition of Octo shampoo (من المصنع)

Quantity %	Ingredient — المكوّن
12	Sodium lauroyl sarcosinate
1	Panthenol
5	Coca diethanol amid (Diterol 87)
3	Coca amido propyl betaine (Tego betaine L7)
0.7	**Piroctone olamine (Octopirox)**
1	Cetrimonium Chloride
2	**Salicylic acid**
0.5%	**Selenium sulfide**
1%	**Zinc pyrithione**
1%	Tea tree oil
3%	Neem oil
0.5	Menthol
0.2	Peppermint oil
1	Jojoba oil

% Quantity	Ingredient — المكوّن
0.2	Ginger extract
1%	Squalene
2%	Castor oil
0.5	Sodium chloride
0.5	Citric acid
0.1	EDTA
0.5	Phenoxy ethanol
0.5	Sodium benzoate
0.5	Chamomile extract
2	Sesame oil
0.7	Perfume
QS	Colors blue CI 42090
100	Water add to

04 التركيبة كما في العرض التقديمي — COMPOSITION

- 1- OCTOPIROX (piroctone olamine)
- 2- Selenium sulfide
- 3- Zinc pyrithione
- 4- Salicylic acid
- 5- Panthenol
- 6- Tea tree oil
- 7- Neem oil

8- Menthol

9- Peppermint oil

10- Ginger oil

11- Jojoba oil

12- Squalene

13- Castor oil

14- Honey

05 مميزات Octo — Octo shampoo

Low Recurrence Rate — due to

- High adsorption to hair keratin.
- Antibacterial effect (Mixed infections (bacterial & fungal) delay the cure and increase the resistance and precipitate the relapse).

Octopirox

- The Most Recent Pyridone Derivative.
- Broad spectrum Antifungal, Antibacterial.
- Rapid action and high efficacy.
- Low recurrence rate.
- New safety profile.

الأمان — Summary

- Safe for pregnant, lactating and children.
- No eye irritation.
- No photosensitization.
- No metal discoloration.
- Negligible systemic absorption.

06 الدراسات والبيانات العلمية لـ Octopirox

Antidandruff action in shampoo form

- Shampoo with 0.75% octopirox vs Placebo shampoo — % decrease in incidence of dandruff over 0-42 treatment days (application once weekly).

Antidandruff Action in Hair Tonics

- Hair tonic with 0.1% octopirox vs Placebo (40% isopropanol / 60% water) — decrease in incidence of dandruff (%) over 0-42 days treatment time.

Antibacterial Spectrum (Trial done at Difco lab. Detroit. USA)

- Gram-positive: Staph. aureus, Micrococcus luteus (1 strain), Streptoc. pyogenes (2), Bac. subtilis (1).
- Gram-negative: Escherichia coli (9), Salmonella var. species (8), Proteus var. species (9), Klebsiella var. species (3), Enterobacter var. species (4), Shigella flexneri (1), Pseudomonas aeruginosa (8), Haemophilus influenzae (1), Corynebact. var. species (2), Past. multocida (1).
- MIC range tested: 4 – 1000 µg/ml.

Adsorption to Hair keratin

- The increase of concentration of octopirox is accompanied by increase in the amount adsorbed to hair keratin.
- 3 min treatment of human hair (octopirox + 15% alkylether sulphate sod. sulph) — adsorbed amount (ug/g hair) vs Octopirox % in shampoo (0.5 – 1 – 1.5).
- pH has only a slight effect on adsorption of octopirox to hair (pH 5-8).

In vitro activity against Pityrosporum ovale (orbiculare)

- Efficacy against Malassezia (pityrosporum ovale), the main cause of dandruff — fungus growth score vs octopirox concentration 1–500 µg/ml compared with control.

Antifungal Spectrum — MIC for most important fungal species bet. (0.5-4 mcg/ml)

- Trichophyton rubrum (5 strains), Trichophyton mentagrophytes (4), Other Trichophyton species (1), Microsporum canis (1), Other Microsporum species (2), Epidermophyton floccosum (1), Candida albicans (5), Candida tropicalis (3), Other yeastlike fungi (3), Aspergillus niger (1), Aspergillus fumigatus (2), Other moulds (4).

Is pyrithione zinc better than ketoconazole?

- During the second cross-over study week, the 1% pyrithione zinc conditioning shampoo was significantly better than the 2% ketoconazole shampoo at improving hair frizz/flyaway (p=0.0053) and hair smoothness (p=0.0041).

07 فوائد المكونات الأخرى

Tea tree oil

- A study indicated that shampoo with 5% tea tree oil was effective at reducing dandruff caused by the yeast Pityrosporum ovale (malassezia).
- Study participants used either tea tree oil shampoo, or a placebo, for one month. Tea tree oil shampoo users had a 41% reduction in dandruff severity.
- Reduces itching and other dandruff symptoms.

Neem oil

- antifungal properties can help treat dandruff.
- It is effective against dandruff-causing fungi, including Candida and Malassezia.
- Its active constituent is nimbidin that has anti-inflammatory and antiseptic properties.

Ginger

- known for its antiseptic, anti-fungal, and anti-bacterial which are all great for dealing with dandruff caused by microbes.
- Oily Skin Dandruff can be treated by regularly using ginger shampoo — can help in reducing the amount of excess oil produced by the sebum on the scalp.

Squalane

- a lipid produced naturally by your own skin cells, has anti-inflammatory properties that can reduce redness and swelling.
- naturally present in olives, rice bran, and sugarcane. It's also found and harvested from shark livers.

Panthenol

- Has the ability to penetrate, strengthen and thicken hair.
- Stimulate the epidermal regeneration.
- Alleviates hair dryness.

Jojoba oil

- Great moisturizing for hair.
- Removes irritation.
- Softener for hair.
- Effective in reducing dandruff.
- Promotes hair growth.
- Has the ability to penetrate the hair shaft to make it thicker and stronger and prevent breakage.
- Has the ability disintegrate crusted sebum.

Zinc pyrithione

- antibacterial, antimicrobial, and antifungal properties help treat seborrheic dermatitis (also called dandruff), scalp psoriasis, and acne. It can inhibit the growth of yeast, which is a main factor in dandruff.

Selenium sulfide

- a fast-acting and highly effective active ingredient used in anti-dandruff shampoos. Its efficacy is unmatched when it comes to helping eliminate severe dandruff and seborrheic dermatitis. Like ZPT, selenium sulfide works as an antifungal treatment that inhibits the growth of the dandruff-causing fungus malassezia globosa.

08 دواعي الاستعمال — Indication (For treatment and prophylaxis of)

- القشرة — Dandruff
- التهاب الجلد الدهني — Seborrheic dermatitis
- النخالية المبرقشة — Pityriasis versicolor

09 الجرعة وطريقة الاستخدام — Dosage & Administration

For dandruff control and seborrhoeic dermatitis — As a treatment	علاجياً: 2-3 مرات أسبوعياً لمدة 3 أسابيع — apply 2-3 times weekly for 3 weeks
For dandruff control and seborrhoeic dermatitis — As a prophylactic	وقائياً: مرة أسبوعياً لمدة 3 أشهر — apply once weekly for 3 months
For pityriasis versicolor	مرة يومياً لمدة 5-10 أيام — Apply once daily for 5-10 days

10 الخلفية العلمية: القشرة — Dandruff

What Are Dandruff Treatments?

- Dandruff treatments are ways you can get rid of or control itching and flaking on your scalp. The first two to try are brushing your hair and using a dandruff shampoo.

What is Dandruff?

- Dandruff is a chronic, non-inflammatory condition characterized by excessive scaling of scalp.
- The scales is the dry sebum secreted by sebaceous gland of the skin.
- Normally present in the scalp. Becomes abnormal when excessive.

The scaling process

- The epidermal cells on the scalp slough off continually just as on other parts of the body.
- However the rate of epidermal cell turnover in normal individuals is greater on the scalp than on other parts of the body.
- Dandruff flakes often appear around a hair shaft due to the epithelial growth at the base of the hair. The hair restricts the elimination of sloughed keratin, creating a visible scale.

Incidence

- Dandruff is more common at puberty and young adults.
- More than 50% of population have a moderate to severe dandruff.

Chronic irritation caused by — A: Internal factors

- Microbial infections: Fungal or yeast (mainly Malassezia).
- Bacterial infection which: Decrease fungal eradication; Increase resistance to antidandruff treatment; Increase relapse (recurrence).
- N.B: many strains of microorganism normally present in the skin; its abnormal multiplication & growth only occur under certain circumstance.

What makes dandruff excessive?

- Once it can be noticed it is considered abnormal.
- Sebum secretion of hair covered scalp → (Microbes Lipases) → Free Fatty Acids → (Microbes peroxidases, light/air) → Lipoperoxides → Chronic irritant effect → Acceleration of mitosis in the germ layer → Parakeratosis → Dandruff.

5 reasons why you have dandruff

- 1. Sensitive Scalp: Extremely oily skin or skin that reacts strongly to certain hair care products may develop dandruff.
- 2. Dry Winters: The cold outdoor and warm indoors cause an imbalance that dries out the scalp and makes it itchy/flaky.
- 3. Scalp Fungus: Yeast-like fungus such as Malassezia Globosa feed on skin oils and gives rise to dandruff.
- 4. Skin Disorders: Dry skin diseases like Psoriasis, Seborrheic Dermatitis or Eczema often cause dandruff to develop.
- 5. Stress: Glucocorticoids generated due to stress, change the makeup of scalp cells and cause dandruff.

B: External factors (environmental)

- Air pollution.
- Calcareous water.
- Extreme temperature changes.
- Dyes.
- Vigorous brushing and using hot hairdryers.
- Excessive use of hair sprays and other cosmetics.
- Reference: 1. Ponadea and Lupake (1979). 2. M-Loden et al. (2000).

Malassezia — trigger & response

- Trigger events: Malassezia Yeast + Immune System → Dandruff / Psoriasis.
- Inflammatory response: Skin Inflammation (inflamed cells, peri-follicle).
- Symptoms: Skin hyper-proliferation → Flakes; Hair peri-follicular atrophy → Constriction, Roughness; Promote telogen phase (?) → Hair Loss.

Symptoms

- Excessive Scaling.
- Erythema.
- Itching.

Treatment of dandruff — علاج القشرة 11

Methods used to reduce the visible flaking of dandruff

- 1- Keratolytic agent to dissolve dandruff flakes, as salicylic acid and sulfur to dissolve keratin and facilitate its removal from the scalp in smaller particles.
- 2- Cleaning the hair and scalp frequently: Shampooing the hair and scalp at short intervals, perhaps daily, should control most forms of dandruff.
- 3- Cytostatic agents e.g. selenium sulfide and zinc pyrithione, that reduce the rate of epidermal turnover.
- 4- Dispersing the scales into smaller subunits so that they are less visible, several agents such as coal tar.
- 5- Reduction of microbial count by antifungals as ketoconazole and pyridone derivatives (ciclopirox, octopirox, rilopirox).

General

- There is no cure for dandruff, only control of the condition.
- Other approaches are available which decrease visible dandruff.

Notes — Keratolytics

- Resorcinol acts as a keratolytic by its irritant effect which causes vesicle formation in the stratum corneum.
- Sulfur is believed to function by an inflammatory process causing increased sloughing of cells.
- Salicylic acid may be caused by lowering the pH of the skin causing increased hydration of keratin thus facilitating its loosening and removal.
- Vehicles composition, time of contact and concentration are important considerations to the success of a keratolytic.

12 الخلفية العلمية: التهاب الجلد الدهني — Seborrheic Dermatitis

Symptoms and Signs

- In severe disease, yellow-red, scaling papules appear along the hairline, behind the ears, in the external auditory canals, on the eyebrows, on the bridge of the nose, in the nasolabial folds, and over the sternum.
- Marginal blepharitis with dry yellow crusts and conjunctival irritation may be present.
- Seborrheic dermatitis does not cause hair loss.
- Genetic and climatic factors seem to affect the incidence and severity of the disease; it is usually worse in winter.
- The prognosis is better than in atopic dermatitis.

Definition

- An inflammatory scaling disease of the scalp, face, and occasionally other areas. Despite the name, the composition and flow of sebum are usually normal.

Pityriasis versicolor — distribution

- Fair skin / Dark skin presentations — distribution map: Most common (chest/upper back), Common, Uncommon, Rare.

Treatment

- In adults, zinc pyrithione, selenium sulfide, sulfur and salicylic acid, tar shampoo should be used daily or every other day until dandruff is controlled and twice/week thereafter.
- A corticosteroid lotion (eg, 0.01% fluocinolone acetonide solution or 0.025% triamcinolone lotion) should be rubbed into the scalp or other hairy areas twice daily until scaling and redness are controlled.
- Hydrocortisone 1% cream rubbed in bid or tid will rapidly improve seborrheic dermatitis of the postauricular areas, nasolabial folds, eyelid margins and bridge of the nose; the cream is then used once daily if needed.
- Studies have suggested that topical antifungals (anti-yeast compounds) may be effective in some patients with seborrheic dermatitis and have focused attention on the possible role of pityrosporum ovale (a common lipophilic yeast normally present in follicles) as a cause for this disease.
