الخلفية العلمية (من العرض التقديمي)

Vaginal Immune System

- Vaginal Lactobacilli
- Vaginal PH
- Vaginal discharge

Vaginal Lactobacilli

- Represents 95% of healthy vaginal bacteria.
- There are several types of lactobacilli but the most important type is which produces Hydrogen Peroxide.
- Hydrogen peroxide inhibits growth of harmful bacteria (e.g: E.coli) and HIV in vitro.
- Estrogen improves lactobacilli colonization by enhancing epithelial cells producing glycogen.

Vaginal PH

- Normal vaginal PH is 3.8-4.5
- Lactic acid produced by lactobacilli is the main cause of the acidic PH, so interruption of lactobacilli will upset the vaginal PH balance and vice versa.
- Acidic vaginal PH helps limit the growth of other organisms and inhibits adherence of bacteria to vaginal epithelial cells.

Vaginal Discharge

- A normal vagina is constantly kept moist by its slick, slippery and savory natural discharge.

- Normal physiological discharges helps to clean the vagina as well as keep it lubricated and free from infection and other germs.
- Healthy vaginal discharge smells mild earthy, it certainly doesn't smell strong foul odor.

Factors that corrupt normal vaginal immune system

- Medicine: Antibiotics wipe out good bacteria and increase the risk of infection; contraceptives or any hormone containing drugs.
- Menstrual cycle: due to hormonal fluctuations which alter PH-balance.
- Pregnancy and breastfeeding: the hormone levels alter PH too.
- After sexual intercourse: semen is of alkaline PH and may cause irritation.
- Emotional stress.
- Poor diet and insufficient sleep hours.
- Highly perfumed or alkaline vaginal cleansers.

Vaginitis Types

- Infectious — Non STD vaginitis: Bacterial vaginosis, Candidiasis.
- Infectious — STD vaginitis: Trichomonas vaginalis, Chlamydia trachomatis, Neisseria Gonorrhea.
- Non infectious: Atrophic vaginitis, Allergic vaginitis, Vaginitis due to abortion or delivery.

Vaginitis Symptoms

- An increase in the amount of discharge.
- A change in the color or smell of discharge.
- Irritation.
- Itchiness.
- Burning around the vagina.
- Discomfort during urination or sexual intercourse may also occur.

Femina is used in cases of — دواعي الاستعمال
